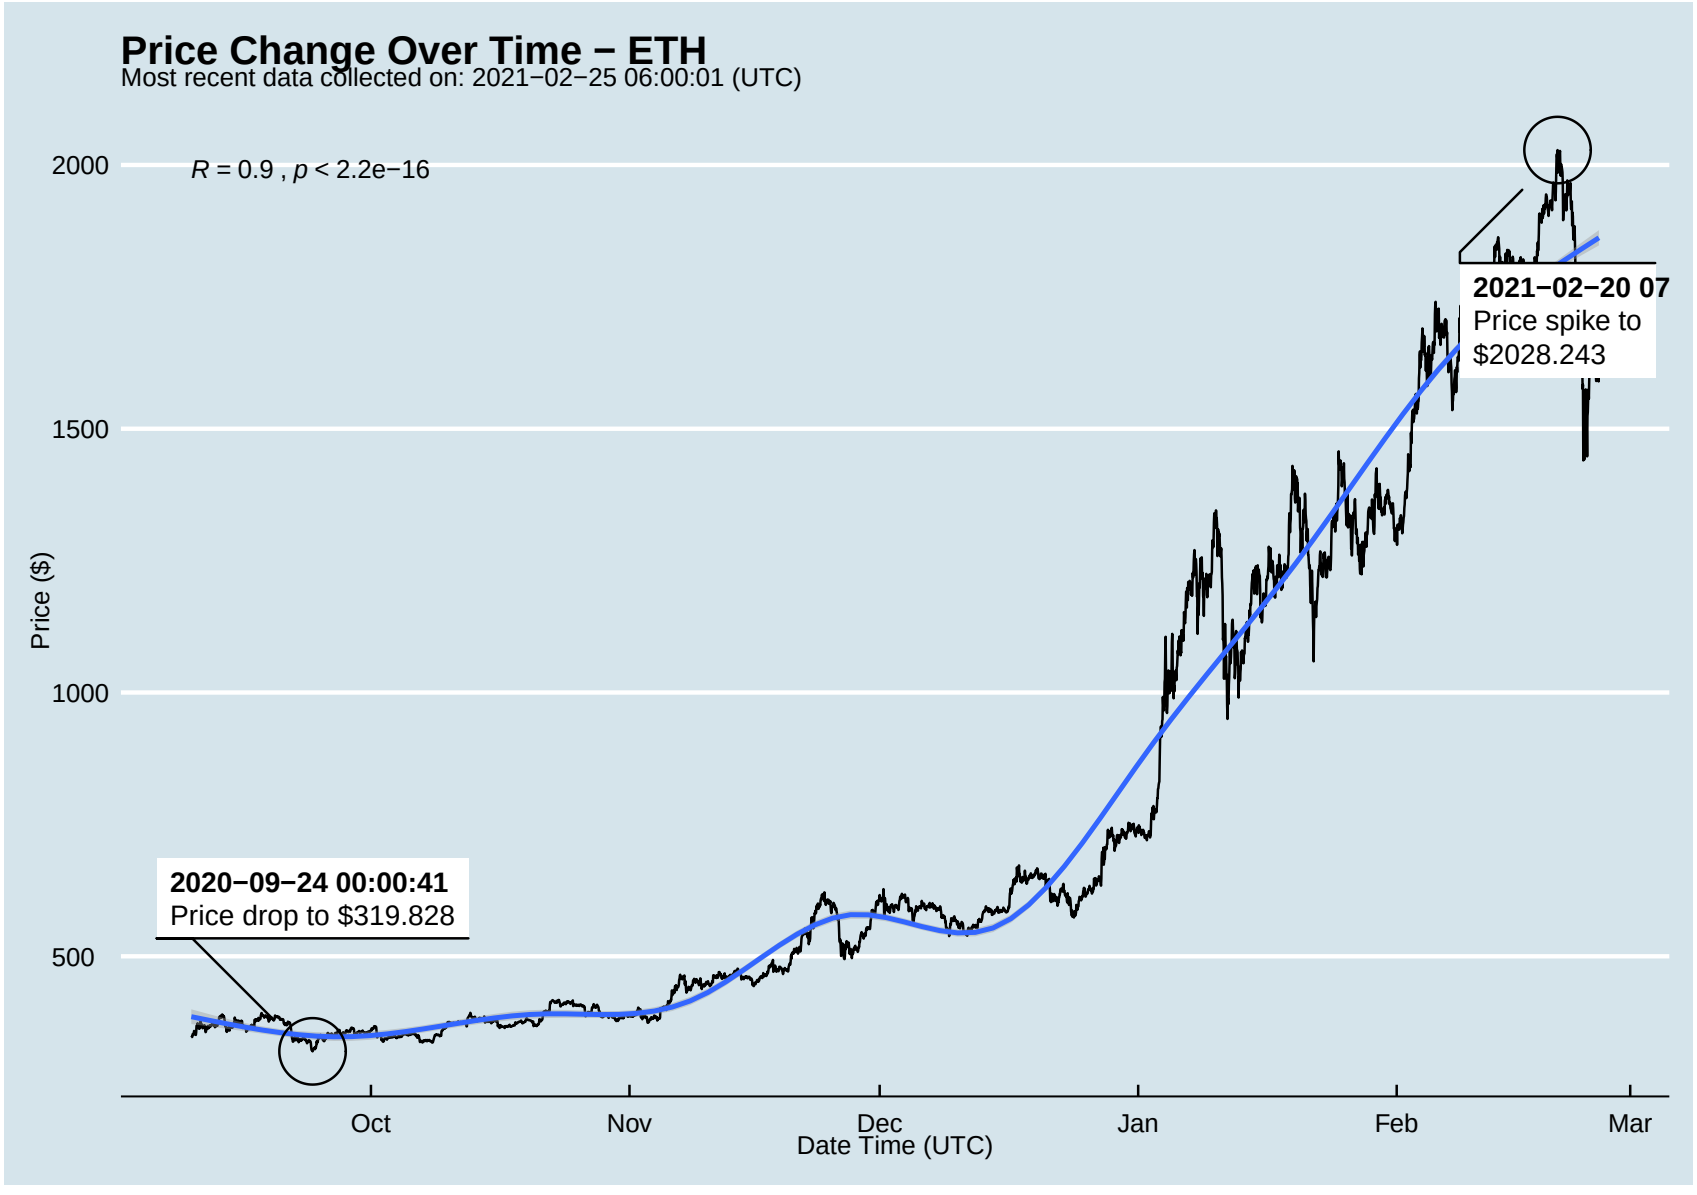
Overview

This document has code embedded throughout. In the next section we will create a visualization using the already loaded dataset `eth_data`:

```
datatable(eth_data)
```

Price Chart - Ethereum



Python Code Example

```
import pandas as pd
# Create the Python object from R
df = r.cryptodata
# Show the new Python dataframe
df
```

```
##          pair symbol  ask_1_price       date_time_utc
## 0      ETHUSD    ETH     1620.937 2021-02-25 06:00:01
## 1      BTCUSD    BTC    50389.910 2021-02-25 06:00:00

One more Python example

The code below creates a new column price_percentile that specifies if the price for the row was in the upper or lower 50th percentile of prices (BTC should be upper and ETH lower):

```
import numpy as np
# Create a new column based on the ask_1_price value:
df['price_percentile'] = np.where(df['ask_1_price'] >
                                  np.percentile(df['ask_1_p
                                 'upper 50th percentile of price
                                 'lower 50th percentile of price
# Show modified dataframe:
df[['symbol', 'ask_1_price', 'price_percentile']]
```

```
##       symbol  ask_1_price                    price_percentil
## 0        ETH     1620.937  lower 50th percentile of price
## 1        BTC    50389.910  upper 50th percentile of price
## 2        ETH     1589.670  lower 50th percentile of price
## 3        BTC    49628.970  upper 50th percentile of price
## 4        ETH     1601.404  lower 50th percentile of price
```
