Overview

This document has code embedded throughout. In the next section we will create a visualization using the already loaded dataset `eth_data`:

```
datatable(eth_data)
```

Price Chart - Ethereum

Python Code Example

```
import pandas as pd
# Create the Python object from R
df = r.cryptodata
# Show the new Python dataframe
df
```

```
##           pair symbol  ask_1_price      date_time_utc
## 0      BTCUSD   BTC    49351.970 2021-03-07 06:00:01
## 1      ETHUSD   ETH     1662.515 2021-03-07 06:00:01
## 2      BTCUSD   BTC    49435.620 2021-03-07 05:00:01
## 3      ETHUSD   ETH     1655.808 2021-03-07 05:00:01
## 4      BTCUSD   BTC    49554.190 2021-03-07 04:00:01
## ...      ...      ...           ...           ...
## 9153 BTCUSD   BTC    11972.900 2020-08-10 06:03:50
## 9154 BTCUSD   BTC    11985.890 2020-08-10 05:03:48
## 9155 BTCUSD   BTC    11997.470 2020-08-10 04:32:55
## 9156 BTCUSD   BTC     10686.880                NaT
## 9157 ETHUSD   ETH       357.844                NaT
```

One more Python example

The code below creates a new column `price_percentile` that specifies if the price for the row was in the upper or lower 50th percentile of prices (BTC should be upper and ETH lower):

```
import numpy as np
# Create a new column based on the ask_1_price value:
df['price_percentile'] = np.where(df['ask_1_price'] >
                                  np.percentile(df['ask_1_p
                                  'upper 50th percentile of price
                                  'lower 50th percentile of price

# Show modified dataframe:
df[['symbol', 'ask_1_price', 'price_percentile']]
```

##	symbol	ask_1_price	price_percentile
## 0	BTC	49351.970	upper 50th percentile of price
## 1	ETH	1662.515	lower 50th percentile of price
## 2	BTC	49435.620	upper 50th percentile of price
## 3	ETH	1655.808	lower 50th percentile of price
## 4	BTC	49554.190	upper 50th percentile of price
