Overview

This document has code embedded throughout. In the next section we will create a visualization using the already loaded dataset `eth_data`:

```
datatable(eth_data)
```

Price Chart - Ethereum

Price Change Over Time – ETH

Most recent data collected on: 2020-12-14 16:00:01 (UTC)

$R = 0.89$, $p < 2.2e-16$

Python Code Example

```
import pandas as pd
# Create the Python object from R
df = r.cryptodata
# Show the new Python dataframe
df
```

```

One more Python example

The code below creates a new column `price_percentile` that specifies if the price for the row was in the upper or lower 50th percentile of prices (BTC should be upper and ETH lower):

```
import numpy as np
# Create a new column based on the ask_1_price value:
df['price_percentile'] = np.where(df['ask_1_price'] >
                                  np.percentile(df['ask_1_p
                                  'upper 50th percentile of price
                                  'lower 50th percentile of price

# Show modified dataframe:
df[['symbol', 'ask_1_price', 'price_percentile']]
```

##	symbol	ask_1_price	price_percentile
## 0	ETH	583.641	lower 50th percentile of price
## 1	BTC	19193.870	upper 50th percentile of price
## 2	ETH	582.559	lower 50th percentile of price
## 3	BTC	19220.950	upper 50th percentile of price
## 4	ETH	582.140	lower 50th percentile of price
