Overview

This document has code embedded throughout. In the next section we will create a visualization using the already loaded dataset `eth_data`:

```
datatable(eth_data)
```

Price Chart - Ethereum

Python Code Example

```
import pandas as pd
# Create the Python object from R
df = r.cryptodata
# Show the new Python dataframe
df
```

```
##           pair symbol  ask_1_price      date_time_utc
## 0      BTCUSD   BTC      28969.180 2020-12-31 06:00:01
## 1      ETHUSD   ETH        741.067 2020-12-31 06:00:01
## 2      BTCUSD   BTC      29024.380 2020-12-31 05:00:01
## 3      ETHUSD   ETH        742.639 2020-12-31 05:00:01
## 4      BTCUSD   BTC      29025.750 2020-12-31 04:00:01
## ...      ...      ...      ...      ...
## 5985  BTCUSD   BTC      11972.900 2020-08-10 06:03:50
## 5986  BTCUSD   BTC      11985.890 2020-08-10 05:03:48
## 5987  BTCUSD   BTC      11997.470 2020-08-10 04:32:55
## 5988  BTCUSD   BTC      10686.880                NaT
## 5989  ETHUSD   ETH        357.844                NaT
```

One more Python example

The code below creates a new column `price_percentile` that specifies if the price for the row was in the upper or lower 50th percentile of prices (BTC should be upper and ETH lower):

```
import numpy as np
# Create a new column based on the ask_1_price value:
df['price_percentile'] = np.where(df['ask_1_price'] >
                                  np.percentile(df['ask_1_p
                                  'upper 50th percentile of price
                                  'lower 50th percentile of price

# Show modified dataframe:
df[['symbol', 'ask_1_price', 'price_percentile']]
```

	##	symbol	ask_1_price	price_percentile
	## 0	BTC	28969.180	upper 50th percentile of price
	## 1	ETH	741.067	lower 50th percentile of price
	## 2	BTC	29024.380	upper 50th percentile of price
	## 3	ETH	742.639	lower 50th percentile of price
	## 4	BTC	29025.750	upper 50th percentile of price
