Overview

This document has code embedded throughout. In the next section we will create a visualization using the already loaded dataset `eth_data`:

```
datatable(eth_data)
```

Price Chart - Ethereum

Python Code Example

```
import pandas as pd
# Create the Python object from R
df = r.cryptodata
# Show the new Python dataframe
df
```

```

One more Python example

The code below creates a new column `price_percentile` that specifies if the price for the row was in the upper or lower 50th percentile of prices (BTC should be upper and ETH lower):

```
import numpy as np
# Create a new column based on the ask_1_price value:
df['price_percentile'] = np.where(df['ask_1_price'] >
                                np.percentile(df['ask_1_price'], 50),
                                'upper 50th percentile of prices',
                                'lower 50th percentile of prices')
# Show modified dataframe:
df[['symbol', 'ask_1_price', 'price_percentile']]
```

```
##          symbol  ask_1_price      price_percentile
## 0          ETH      1899.575  lower 50th percentile of prices
## 1          BTC      52188.470  upper 50th percentile of prices
## 2          ETH      1900.101  lower 50th percentile of prices
## 3          BTC      52147.500  upper 50th percentile of prices
## 4          BTC      52024.550  upper 50th percentile of prices
## ...      ...      ...
## 8337 BTC      11972.900  upper 50th percentile of prices
