Overview

This document has code embedded throughout. In the next section we will create a visualization using the already loaded dataset `eth_data`:

```
datatable(eth_data)
```

Price Chart - Ethereum

Python Code Example

```
import pandas as pd
# Create the Python object from R
df = r.cryptodata
# Show the new Python dataframe
df
```

One more Python example

The code below creates a new column `price_percentile` that specifies if the price for the row was in the upper or lower 50th percentile of prices (BTC should be upper and ETH lower):

```
import numpy as np
# Create a new column based on the ask_1_price value:
df['price_percentile'] = np.where(df['ask_1_price'] >
                                np.percentile(df['ask_1_price'], 50),
                                'upper 50th percentile of prices',
                                'lower 50th percentile of prices')
# Show modified dataframe:
df[['symbol', 'ask_1_price', 'price_percentile']]

##      symbol  ask_1_price  price_percentile
## 0      ETH    3534.694  lower 50th percentile of prices
## 1      BTC    57907.040  upper 50th percentile of prices
## 2      ETH    3563.105  lower 50th percentile of prices
## 3      BTC    58056.170  upper 50th percentile of prices
## 4      ETH    3531.051  lower 50th percentile of prices
## ...      ...          ...
## 12123    BTC    11972.900  upper 50th percentile of prices
## 12124    BTC    11985.890  upper 50th percentile of prices
## 12125    BTC    11997.470  upper 50th percentile of prices
