Overview

This document has code embedded throughout. In the next section we will create a visualization using the already loaded dataset eth_data:

datatable(eth_data)

Price Chart - Ethereum

Python Code Example

```
import pandas as pd
# Create the Python object from R
df = r.cryptodata
# Show the new Python dataframe
df
```

##		pair	symbol	ask_1_price	$\mathtt{date_time_utc}$
##	0	ETHUSD	ETH	2817.237	2021-06-03 06:00:01
##	1	BTCUSD	BTC	38789.510	2021-06-03 06:00:00
##	2	ETHUSD	ETH	2767.812	2021-06-03 05:00:01
##	3	BTCUSD	BTC	37976.570	2021-06-03 05:00:00
##	4	ETHUSD	ETH	2726.214	2021-06-03 04:00:01
##					• • •
##	13367	BTCUSD	BTC	11972.900	2020-08-10 06:03:50
##	13368	BTCUSD	BTC	11985.890	2020-08-10 05:03:48
##	13369	BTCUSD	BTC	11997.470	2020-08-10 04:32:55
##	13370	BTCUSD	BTC	10686.880	NaT
##	13371	ETHUSD	ETH	357.844	NaT

One more Python example

The code below creates a new column price_percentile that specifies if the price for the row was in the upper or lower 50th percentile of prices (BTC should be upper and ETH lower):

```
import numpy as np
# Create a new column based on the ask 1 price value:
df['price percentile'] = np.where(df['ask 1 price'] >
                                  np.percentile(df['ask_1_]
```

'upper 50th percentile of price 'lower 50th percentile of price # Show modified dataframe: df[['symbol', 'ask_1_price', 'price_percentile']]

```
symbol
##
                 ask_1_price
                                              price_percent:
            ETH
                    2817.237
                               lower 50th percentile of price
## 0
                   38789.510
                               upper 50th percentile of price
## 1
            BTC
```

ETH 2767.812 lower 50th percentile of price ## 2 ## 3 BTC 37976.570 upper 50th percentile of price ## / TTT 2726 211 larram EO+h mamaan+ila af nmi
