#### Overview

This document has code embedded throughout. In the next section we will create a visualization using the already loaded dataset eth\_data:

datatable(eth\_data)

#### Price Chart - Ethereum

# Python Code Example

```
import pandas as pd
# Create the Python object from R
df = r.cryptodata
# Show the new Python dataframe
df
```

##		pair	symbol	ask_1_price	date_time_uto	;

BTC

DTC

The code below creates a new column price\_percentile that specifies if the price for the row was in the upper or lower 50th percentile of prices (BTC should be upper and ETH lower):

```
import numpy as np
# Create a new column based on the ask 1 price value:
df['price percentile'] = np.where(df['ask 1 price'] >
                                  np.percentile(df['ask_1_]
```

'upper 50th percentile of price 'lower 50th percentile of price # Show modified dataframe: df[['symbol', 'ask\_1\_price', 'price\_percentile']]

```
##
         symbol
                 ask_1_price
                                               price_percent:
            ETH
                    2102.043
                               lower 50th percentile of price
## 0
                   58280.490
                               upper 50th percentile of price
## 1
            BTC
            ETH
                    2087.308
                               lower 50th percentile of price
## 2
