Overview

This document has code embedded throughout. In the next section we will create a visualization using the already loaded dataset eth_data:

datatable(eth_data)

Price Chart - Ethereum

Python Code Example

```
import pandas as pd
# Create the Python object from R
df = r.cryptodata
# Show the new Python dataframe
df
```

##		pair	symbol	ask_1_price	date_time_utc
##	0	ETHUSD	ETH	2477.647	2021-04-17 06:00:01
##	1	BTCUSD	BTC	62149.940	2021-04-17 06:00:00
##	2	BTCUSD	BTC	62197.420	2021-04-17 05:00:01
##	3	ETHUSD	ETH	2480.558	2021-04-17 05:00:01
##	4	ETHUSD	ETH	2485.906	2021-04-17 04:00:01
##					
##	11117	BTCUSD	BTC	11972.900	2020-08-10 06:03:50
##	11118	BTCUSD	BTC	11985.890	2020-08-10 05:03:48
##	11119	BTCUSD	BTC	11997.470	2020-08-10 04:32:55
##	11120	BTCUSD	BTC	10686.880	NaT
##	11121	ETHUSD	ETH	357.844	NaT

One more Python example

/

TTT

The code below creates a new column price_percentile that specifies if the price for the row was in the upper or lower 50th percentile of prices (BTC should be upper and ETH lower):

```
import numpy as np
# Create a new column based on the ask 1 price value:
df['price percentile'] = np.where(df['ask 1 price'] >
```

np.percentile(df['ask_1_] 'upper 50th percentile of price 'lower 50th percentile of price # Show modified dataframe: df[['symbol', 'ask_1_price', 'price_percentile']]

symbol ask_1_price price_percent: ETH 2477.647 lower 50th percentile of price ## 0

BTC 62149.940 upper 50th percentile of price ## 1 BTC 62197.420 upper 50th percentile of price ## 2 ## 3 ETH 2480.558 lower 50th percentile of price
