# R Markdown Output

#### Overview

This document has code embedded throughout. In the next section we will create a visualization using the already loaded dataset eth\_data:

datatable(eth\_data)

#### Price Chart - Ethereum

### Python Code Example

.. ..

```
import pandas as pd
# Create the Python object from R
df = r.cryptodata
# Show the new Python dataframe
df
```

##	5165	ETHUSD	ETH	357.844		NaT

## One more Python example

The code below creates a new column price\_percentile that specifies if the price for the row was in the upper or lower 50th percentile of prices (BTC should be upper and ETH lower):

```
import numpy as np
# Create a new column based on the ask 1 price value:
df['price percentile'] = np.where(df['ask 1 price'] >
```

np.percentile(df['ask\_1\_] 'upper 50th percentile of price 'lower 50th percentile of price # Show modified dataframe:

df[['symbol', 'ask\_1\_price', 'price\_percentile']] ask\_1\_price price\_percenti ## symbol ETH 585.171 lower 50th percentile of price ## 0

19086.240 upper 50th percentile of price ## 1 BTC ETH 584.017 lower 50th percentile of price ## 2 ## 3 BTC 19051.790 upper 50th percentile of price ## / ETI larram EO+h namaan+ila af nmia
