## R Markdown Output

## Overview

This document has code embedded throughout. In the next section we will create a visualization using the already loaded dataset eth\_data:

datatable(eth\_data)

Price Chart - Ethereum

## Python Code Example

```
import pandas as pd
# Create the Python object from R
df = r.cryptodata
# Show the new Python dataframe
df
## pair symbol ask_1_pric
```

| ## |      | pair           | symbol | ask_1_price | date_tim      | ne_utc |
|----|------|----------------|--------|-------------|---------------|--------|
| ## | 0    | ETHUSD         | ETH    | 1349.388    | 2021-01-31 06 | :00:01 |
| ## | 1    | BTCUSD         | BTC    | 33753.880   | 2021-01-31 06 | :00:00 |
| ## | 2    | ETHUSD         | ETH    | 1360.523    | 2021-01-31 05 | :00:01 |
| ## | 3    | ${\tt BTCUSD}$ | BTC    | 34031.990   | 2021-01-31 05 | :00:00 |
| ## | 4    | ETHUSD         | ETH    | 1356.258    | 2021-01-31 04 | :00:01 |
| ## |      |                |        |             |               |        |
| ## | 7473 | BTCUSD         | BTC    | 11972.900   | 2020-08-10 06 | :03:50 |
| ## | 7474 | ${\tt BTCUSD}$ | BTC    | 11985.890   | 2020-08-10 05 | :03:48 |
| ## | 7475 | ${\tt BTCUSD}$ | BTC    | 11997.470   | 2020-08-10 04 | :32:55 |
| ## | 7476 | BTCUSD         | BTC    | 10686.880   |               | NaT    |

```
## 7477 ETHUSD
                    ETH
                             357.844
                                                      NaT
##
## [7478 rows x 4 columns]
```

## One more Python example

The code below creates a new column price\_percentile that specifies if the price for the row was in the upper or lower 50th percentile of prices (BTC should be upper and ETH lower):

```
import numpy as np
# Create a new column based on the ask_1_price value:
df['price_percentile'] = np.where(df['ask_1_price'] >
                                  np.percentile(df['ask_1_price'], 50),
                            'upper 50th percentile of prices',
                            'lower 50th percentile of prices')
# Show modified dataframe:
df[['symbol', 'ask_1_price', 'price_percentile']]
##
        symbol
                ask_1_price
                                            price_percentile
## O
           ETH
                   1349.388 lower 50th percentile of prices
           BTC
                  33753.880 upper 50th percentile of prices
## 1
## 2
           ETH
                   1360.523 lower 50th percentile of prices
                  34031.990 upper 50th percentile of prices
## 3
           BTC
## 4
           ETH
                   1356.258 lower 50th percentile of prices
## ...
                  11972.900 upper 50th percentile of prices
## 7473
           BTC
## 7474
                  11985.890 upper 50th percentile of prices
           BTC
## 7475
           BTC
                  11997.470 upper 50th percentile of prices
## 7476
                  10686.880 upper 50th percentile of prices
           BTC
## 7477
           ETH
                    357.844 lower 50th percentile of prices
##
## [7478 rows x 3 columns]
```
