Overview

This document has code embedded throughout. In the next section we will create a visualization using the already loaded dataset eth_data:

datatable(eth_data)

Price Chart - Ethereum

Python Code Example

```
import pandas as pd
# Create the Python object from R
df = r.cryptodata
# Show the new Python dataframe
df
```

##		pair	symbol	ask_1_price	$\mathtt{date_time_utc}$
##	0	BTCUSD	BTC	55040.290	2021-03-29 06:00:01
##	1	ETHUSD	ETH	1688.805	2021-03-29 06:00:01
##	2	ETHUSD	ETH	1696.581	2021-03-29 05:00:01
##	3	BTCUSD	BTC	55311.120	2021-03-29 05:00:00
##	4	BTCUSD	BTC	55360.000	2021-03-29 04:00:01
##					• • •
##	10205	BTCUSD	BTC	11972.900	2020-08-10 06:03:50
##	10206	BTCUSD	BTC	11985.890	2020-08-10 05:03:48
##	10207	BTCUSD	BTC	11997.470	2020-08-10 04:32:55
##	10208	BTCUSD	BTC	10686.880	NaT
##	10209	ETHUSD	ETH	357.844	NaT

One more Python example

ETH

BTC

DTC

2 ## 3

/

The code below creates a new column price_percentile that specifies if the price for the row was in the upper or lower 50th percentile of prices (BTC should be upper and ETH lower):

```
import numpy as np
# Create a new column based on the ask 1 price value:
df['price percentile'] = np.where(df['ask 1 price'] >
```

np.percentile(df['ask_1_] 'upper 50th percentile of price 'lower 50th percentile of price # Show modified dataframe: df[['symbol', 'ask_1_price', 'price_percentile']]

symbol ## ask_1_price price_percent: BTC 55040.290 upper 50th percentile of price ## 0 1688.805 lower 50th percentile of price ## 1 ETH

lower 50th percentile of price

upper 50th percentile of price
