Overview

This document has code embedded throughout. In the next section we will create a visualization using the already loaded dataset eth_data:

datatable(eth_data)

Price Chart - Ethereum

Python Code Example

```
import pandas as pd
# Create the Python object from R
df = r.cryptodata
# Show the new Python dataframe
df
```

##		pair	symbol	ask_1_price	date_time_utc

##	11553	ETHUSD	ETH	357.844	NaT

One more Python example

The code below creates a new column price_percentile that specifies if the price for the row was in the upper or lower 50th percentile of prices (BTC should be upper and ETH lower):

```
import numpy as np
# Create a new column based on the ask 1 price value:
df['price percentile'] = np.where(df['ask 1 price'] >
```

np.percentile(df['ask_1_] 'upper 50th percentile of price 'lower 50th percentile of price # Show modified dataframe: df[['symbol', 'ask_1_price', 'price_percentile']]

symbol ## ask_1_price price_percent: BTC 52561.640 upper 50th percentile of price ## 0

2469.481 lower 50th percentile of price ## 1 ETH BTC 52314.570 upper 50th percentile of price ## 2 ## 3 ETH 2454.200 lower 50th percentile of price ## / DTC E0304 3EV unnam EO+h namaan+ila af nwi
