Overview

This document has code embedded throughout. In the next section we will create a visualization using the already loaded dataset `eth_data`:

```
datatable(eth_data)
```

Price Chart - Ethereum

Python Code Example

```python
import pandas as pd
# Create the Python object from R
df = r.cryptodata
# Show the new Python dataframe
df
```

```

One more Python example

The code below creates a new column `price_percentile` that specifies if the price for the row was in the upper or lower 50th percentile of prices (BTC should be upper and ETH lower):

```python
import numpy as np
# Create a new column based on the ask_1_price value:
df['price_percentile'] = np.where(df['ask_1_price'] >
                          np.percentile(df['ask_1_price'], 50),
                     'upper 50th percentile of prices',
                     'lower 50th percentile of prices')
# Show modified dataframe:
df[['symbol', 'ask_1_price', 'price_percentile']]
```

```
##        symbol  ask_1_price                 price_percentile
## 0         ETH     2274.186  lower 50th percentile of prices
## 1         BTC    34346.060  upper 50th percentile of prices
## 2         BTC    34203.180  upper 50th percentile of prices
## 3         ETH     2264.684  lower 50th percentile of prices
## 4         BTC    34343.410  upper 50th percentile of prices
## ...       ...          ...                              ...
